

**LISTING OF THE CLAIMS**

1. (Previously Presented) A method of defining standard catch styles used in generating speech application code for managing catch events, the method comprising the steps of:

presenting a style-selection menu that allows for selection of one or more catch styles, each catch style corresponding to a system response to a catch event, the catch event comprising at least one event in which a user entry is not understood occurring during a dialog turn, the event being selected from the group consisting of a user request for help, a non-input entry, and a non-matching entry; and,

upon selection of a catch style, preparing the system response for each catch event.

2. (Original) The method of claim 1, wherein the step of preparing the system response for each catch event comprises:

presenting one or more text fields for receiving a contextual message, the contextual message entered in each text field corresponding to a new audio message to be played in response to the particular catch event if the selected catch style requires playing of the new audio message in response to a particular catch event.

3. (Original) The method of claim 2, wherein the entered contextual message is different for each catch event.

4. (Original) The method of claim 2, wherein the entered contextual message is the

same for each catch event.

5. (Original) The method of claim 1 wherein the step of preparing the system response for each catch event comprises replaying a system prompt if the selected catch style does not require playing of a new audio message in response to a particular catch event.
6. (Original) The method of claim 1 wherein the style-selection menu further includes a field reciting details about the one or more catch styles.
7. (Original) The method of claim 1 wherein the style-selection menu further includes a field identifying a final action to be taken if the catch event is not corrected by a user.
8. (Original) The method of claim 1, wherein the style-selection menu further includes a control for inserting variables in the contextual message.
9. (Original) The method of claim 1, wherein the style-selection menu further includes controls for inserting programmed pauses of specified duration values in the contextual message.
10. (Original) The method of claim 1, wherein the style-selection menu further includes a control to enable acceleration of a system timeout upon occurrence of a help catch event.

Claims 11-29 (Withdrawn).
